

# MICYRN

*better health for mothers and children*

## Biobanking Resources

- MICYRN has been partnering with the [P3G International Paediatric Research Programme \(P3G\)](#), a not-for-profit international consortium dedicated to facilitating collaboration between researchers and biobanks working on human population genomics.
- The [Mount Sinai Hospital Biobank](#) now includes over 9000 specimens. It is a non-profit biobank operated by researchers, for researchers. The cost recovery fees help reimburse the cost of collection and storage of samples but the biobank nevertheless rely on institutional support to operate.
- The [Royal College of Paediatrics and Child Health](#) has a number of online resources for researchers looking to work with and involve children in research.
- The [Biobank Resource Centre](#) is an excellent resource, providing document templates, education and certification, registration, and tools.
